

FINAL REMARKS ON INSPECTION P.O. Pk011521 - STYLE: S11280/90/210

Dear Faisal Bhai,

Besides our inspection report which we PASS in certain circumstances which you know already.

Some of the major issue we high lighted during our inspection are:

- 1) damage red rivets we will not accept damage red rivets in any further inspection, it will cause the failure and hold of the shipment, if found.
- 2) the patch work jeans you didn't do pre production meeting how to do it properly, the glue applied terrible which is creating crease and that making garment stiff and cause rashes to the skin.
- 3) the patch did not stitched properly and due to this holes are clearly visible during final inspection, (we understand you resort the goods), but I am sure the lack of time did not allow you to do it properly and when the glue turn to stiff coating also did not allow you to move the patch to the proper place once it placed wrongly when the glue was wet.
- 4) the patch grinding left black marks which looks terrible.
- 5) the grinding part does not clear well and has left too much fabric uncut even the underneath patch it already there.
- 6) we found one of the whole garment has one leg not clear the top of the fabric after grinding.
- 7) For any further inspection we need packing list in advance before starting inspection.

We understand you are doing all efforts but little more attention will make us all happy when the goods arrive in customer hand.

B. Regards,
Raza / Basit.
